                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical inaging of sites expressing (II). (I) and (II) are useful for treating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. AAS64197-AAS94564 represent novel human diagnostic coding sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO

                                                                                                                                              The present sequence encodes a human protein with hydrophobic domains. CC AAF25169 represents a longer version of the present sequence. The protein possesses a hydrophobic domain and so is a secretory protein CC or a membrane protein. The protein is used as an antigen to prepare CC antibodies. The polynuclectide sequence is useful as a source of probes CC for genetic diagnosis. It is also useful for producing the protein and CC in large quantities and for gene therapy. The eukaryotic cells are used CC for detecting small novel pharmaceuticals. The antibodies are also used CC for detection, quantification and purification of the protein and CC government of the protein and polynucleotide may be used in research or as nutritional CC governments. The protein may have cytokine and cell CC groliferation/differentiation activity, immune stimulating or suppressing CC activity, hematopoiesis regulating activity, tissue growth activity activity and tumour inhibition activity. It may therefore may be used to creat immune deficiencies resulting from autoimmune disorders or CC treat immune deficiencies resulting from autoimmune disorders or confectious diseases, cancer, sepsis, anaemias, burns and ulcers, commune response and enhance coagulation or inhibit thrombosis.

The invention relates to an isolated nucleic acid molecule (I) a nucleotide sequence given in Tables 1-9 (ABV00010-ABV62213) of specification or its complement. (I) is useful for:

(a) assessing whether a patient is afflicted with prostate cance (b) monitoring the progression of prostate cancer in a patient;

(c) assessing the efficacy of a test compound to inhibit prostate cancer in a patient;

(d) assessing the efficacy of a therapy for inhibiting prostate in a patient;
                                                                                                                                                                                                                                                          Claim 1;
                                                                                                                                                                                                                                                                                                  Novel isolated nucleic acid molecule associated with cancerous state of prostate cells and correlating with presence of prostate cancer, useful for detecting presence of prostate cancer, stage of prostate cancer -

                                                                                                                                                                                                                                                treated include autoimmune diseases e.g. rheumatoid arthritis, hyperproliferative disorders e.g. neoplasms of the breast or liver, cardiovascular disorders e.g. cardiac arrest, cerebrovascular disorders e.g. carebral ischaemia, angiogenesis, nervous system disorders e.g. Alzheimer's disease, infections caused by bacteria, viruses and fungi and ocular disorders e.g. corneal infection. The polypeptides can also be used to aid wound healing and epithelial cell proliferation, to prevent skin aging due to sunburn, to maintain organs before transplantation, for supporting cell culture of primary tissues, to regenerate tissues and in chemotaxis. AAS30580-AAS30685 represent novel human lung cancer antigen coding sequences. PCR primers and related sequences of the invention. Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at: ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      The invention relates to novel isolated lung cancer antigen polynucleotides (I) and polypeptides (II). (I) and (II) are used to prevent, treat or ameliorate a medical condition in e.g. humans, mice, rabbits, goats, horses, cats, dogs, chickens or sheep. (I) and (II) are also used in diagnosing a pathological condition or susceptibility to a pathological condition, in particular, lung cancer. The antibodies to (II) can also be used in alleviating symptoms associated with the disorders and in diagnostic immunoassays e.g. radioimmunoassays or enzyme linked immunosorbent assays (ELISA). Disorders which are diagnosed or

The present invention relates to the isolation of novel human respiratory antigens (AAU17685-AAU17975), and cDNA and genomic sequences encoding for these polypeptides. The sequences of the invention are useful for preventing, treating and/or prognosing disorders related to the respiratory system including throat
                                                                                                                                                        Isolated polypeptide disorders related to cancers and also for
                                                                                                                       Disclosure;

The polynucleotide sequences of the invention are useful in gene therapy and antisense therapy. AAS28764 represent genomic sequences encoding for novel human respiratory antigens.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp. wipo.int/pub/published_pct_sequences.

                                                                                              Ś
                                                                                                                                                                                                   The invention relates to an isolated lung cancer related polypeptide its cardinate, allelic variants or homologues. The polypeptide and its nucleic cc acid are useful for preventing, treating, or ameliorating a medical condition in a mammalian subject, for diagnosing a pathological condition cor a susceptibility to a pathological condition in a subject by determining the presence or ameunt of expression of the polypeptide in a cc biological sample and diagnosing a pathological condition hased on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition based on the colorical sample and diagnosing a pathological condition and undifferentiated conditions and undifferentiated carcinoma, adenocarcinoma, aden

The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant)agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune (b) immune disorders e.g. Addison's disease, allergies, autoimmune haemolytic anaemia, autoimmune thyroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colities, (c) cardiovascular disorders such as myocardial ischaemias; (d) wound healing; (e) neurological diseases e.g. cerebral anoxia and epilepsy; and (f) infectious diseases such as viral, bacterial, fungal more than the content of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of the feature of 
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        Sequence 32174

Nucleic acids encoding 3224 human nervous system antigen polypeptides, useful for preventing, diagnosing and/or treating nervous system cancers and metastases -

Disclosure; SEQ ID NO 12690; 1701pp + Sequence Listing; English

The invention relates to novel genes (ABA11004-ABA21534) and proteins (ABB14678-ABB18001) useful for preventing, treating or ameliorating medical conditions e.g. by protein or gene therapy. The genes are isolated from a range of human tissues disclosed in the specification. The nucleic acids, proteins, antibodies and (ant) agonists are useful in the diagnosis, treatment and prevention of: (a) cancer, e.g. breast and ovarian cancer and other cancers of the adrenal gland, bone, bone marrow, breast, gastrointestinal tract, liver, lung, or urogenital; (b) immune disorders e.g. Addison's disease, allergies, autoimmune theroiditis, diabetes mellitus, Crohn's disease, multiple sclerosis, rheumatoid arthritis and ulcerative colitis; (c) cardiovascular disorders such as myocardial ischaemias; (c) disease, and (f) infectious diseases such as viral, bacterial, fungal conditions.
